

# NINAD SHENOY

## Full-Stack Engineer – Java, Distributed Systems, React

📞 +91-9686085774   @ shenoyninad@gmail.com   🔗 <https://www.linkedin.com/in/ninadshenoy>   🔗 <https://github.com/shenoyninad>  
📍 Bengaluru, IN

### SUMMARY

Full-stack engineer, 8 years, Java/Spring and React/Next.js. Build transaction-critical healthcare platforms serving thousands of providers, hospitals, and health systems globally. Currently Software Engineer 3 at Oracle.

### EXPERIENCE

#### Software Engineer 3

##### Oracle | Oracle Health & AI - OHAI

📅 09/2021 - Present   📍 Bangalore, India

Worked on the architecture, design and development of critical processes for healthcare systems.

- Developed a Spring Boot microservice for insurance claim activation in migrations from legacy systems, parallel processing 1000 Kafka events/sec with API checks and Redis cached checkpoints for idempotent resumes with sub-second latency.
- Eliminated manual per-claim lookup and activation across 6 client migrations, processing 3.6M+ records in production across a 3-month period.
- Tech lead of a cross-functional team of 4 engineers through design, review, development and delivery of a claims-ingestion microservice: scheduled X12 835 pickup from OCI Object Storage, virus scanning, X12-to-JSON parsing, and API persistence into AI-agent scrubbing.
- Architected a full-stack template management system for healthcare admins to upload and configure denial appeal and cover letter templates, owning ~30 REST APIs, React/Oracle JET components, and OCI Object Storage integration.
- Defined the token schema and handoff contract consumed by downstream AI agents for dynamic field population, supporting 100+ templates across varied configurations; delivered with 2 engineers.

#### Software Engineer 2

##### Cerner Corporation

📅 10/2019 - 09/2021   📍 Bangalore, India

Worked with a team of senior engineers in the design and implementation of healthcare systems.

- Shipped a patient activity timeline surfacing appointments, charges, balances, claims, and discharge events ordered by workflow stage, with stage-based filtering and infinite scroll that improved data access speed by 75%.
- Developed the React/Redux front end over Java microservices, sustaining sub-3-second loads of ~150 events per patient at peaks of 10K+ concurrent users in production.
- Extended a work item notification framework across 965+ system events with context-specific trigger conditions, spanning changes to ~120 projects in Java and SQL; generates 30–40 work items per patient daily.

#### Software Engineer 1

##### Cerner Corporation

📅 07/2018 - 10/2019   📍 Bangalore, India

Worked under a team of senior engineers in the development and implementation of healthcare systems.

- Remediated 250+ CVEs across Ruby on Rails and Java microservice codebases, upgrading vulnerable dependencies and validating no regression to production behavior.
- Built an internal testing tool using Node.js that captured UI evidence via keyboard shortcut, auto-assembled screenshots into Word documents, and uploaded them to Jira - adopted by 15+ internal teams for black-box workflow verification.
- Built a pluggable user preference engine persisting 27 configurable UI parameters like table column selection, layout, default sort order, and filters - as a drop-in module adoptable by any screen across the application.

### OPEN SOURCE CONTRIBUTION

#### ONDC / Beckn Protocol

Contributed schema definitions, reference implementation, and documentation to the open specification underpinning India's decentralized financial services interoperability standard

### EDUCATION

#### Bachelor of Technology - Computer Science

##### Manipal Institute of Technology

📅 2014 - 2018   📍 Manipal

GPA

8.96 / 10

### SKILLS

#### Languages

Java, JavaScript, TypeScript, SQL

#### Backend

Spring Boot, Node.js, REST APIs, Microservices

#### Frontend

React, Next.js, Redux,

#### Data

MySQL, PostgreSQL, Redis, Kafka,

#### Infrastructure

Docker, Kubernetes, CI/CD, Git, OCI, AWS, Azure

#### Practices

Cloud architecture, System design, API design, Performance optimization, Unit/integration testing, Test-Driven Development
